PROFESSIONAL SUMMARY

Telecommunications engineer focused on data, with early-career knowledge of data analysis, modelling and data engineering. Hands-on with Python and SQL across the path of the data — source and API integration, transformation and modelling in BigQuery, reporting in Looker Studio and Power BI — with practical experience building ELT pipelines that run daily on Google Cloud. I use generative AI to support coding, documentation and technical learning, and bring a grounding in networking, Linux and systematic troubleshooting. Looking for a junior data role — data analysis, Analytics Engineering or Data Engineering — to contribute and keep growing within a team.

TECHNICAL SKILLS

Languages: Python (pandas), SQL

Google Cloud: BigQuery, Cloud Run Jobs, Cloud Scheduler, Secret Manager, Artifact Registry, IAM

Data Engineering: ETL/ELT processes, REST and GraphQL API integration, incremental loading, data cleaning and transformation with pandas, organising data into fact and dimension tables, partitioning and clustering, data quality validation

Containers and Systems: Docker, Linux, Bash

BI and Analytics: Looker Studio, Power BI (DAX, Power Query), Excel, Google Sheets

Version Control: Git, GitHub

Applied AI: Generative AI as development support: code generation and review, debugging, technical documentation and research. Prompt design, agents with custom instructions and commands, Skills, subagents, MCP (Model Context Protocol)

PROFESSIONAL EXPERIENCE

Data Analyst / Junior Data Engineer | Flupix — Social Media, Ads and e-commerce Mar – Aug 2026

- Brought **Social Media, Ads and e-commerce** metrics that were previously checked platform by platform into a single data store, and prepared the data behind the campaign, content and sales reports.
- Built five extraction and loading processes in **Python** on top of the Shopify Admin **GraphQL** API and the Meta, Google Analytics 4, Mailchimp and YouTube **REST APIs**, running the extractors concurrently with explicit per-thread failure handling.
- Organised the data in **BigQuery** into fact and dimension tables, **partitioned and clustered** for **Looker Studio**, with deduplication through **SQL** window functions and three **incremental loading** strategies.
- Containerised each process with **Docker** and ran it as a daily **Cloud Run Job** triggered by **Cloud Scheduler**, with credentials in **Secret Manager**, retries with exponential backoff and rate-limit handling for each API.
- Used **generative AI** throughout development to generate and review code, troubleshoot errors and document the processes, always validating the results against the figures shown in each platform's own interface.

University Intern | Claro Colombia Feb – Jul 2023

- Produced tracking reports on fibre feasibility studies and deliveries, flagging incidents, risks and improvement opportunities for the network team.
- Ran **QoS** laboratory tests to evaluate policy implementation at access points with IPTV traffic prioritisation, and documented procedure, results and findings.

PROJECTS

NGO Financial Management Dashboard Looker Studio, Google Sheets

Income and expense tracking dashboard for a non-profit, built as the capstone of the IBM & Guayerd Data Analytics programme: turns scattered financial records into a single view for following the budget. [View dashboard](#)

Exploratory Data Analysis — Gym Members Python, pandas, NumPy, Matplotlib, Seaborn

Analysis of a 973-record, 15-variable dataset to surface relationships between training habits and physiological measurements, using distribution, correlation and pair plots to communicate the findings. [View repository](#)

Power BI Report Portfolio Power BI, DAX, Power Query

Interactive dashboards on several subjects, each built around a specific reporting question and modelled with Power Query transformations and DAX measures. [View reports](#)

EDUCATION

BSc Telecommunications Engineering | Universidad Piloto de Colombia, Bogotá Aug 2017 – Jul 2023

Data Analytics Fundamentals | IBM & Guayerd Aug – Nov 2024
